

How to release new version

Prerequisite: Code in Dev branch is deployed on server and we will use this version of code to release

1. Add release note in Readme.md file on Dev branch

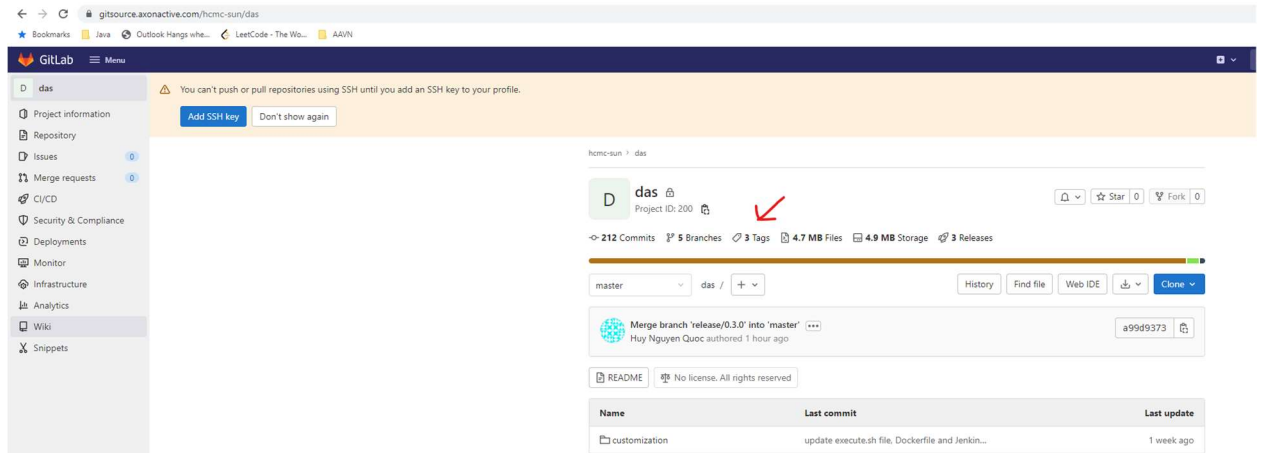

2. Create new branch from Dev branch and naming as: **release/[version]**

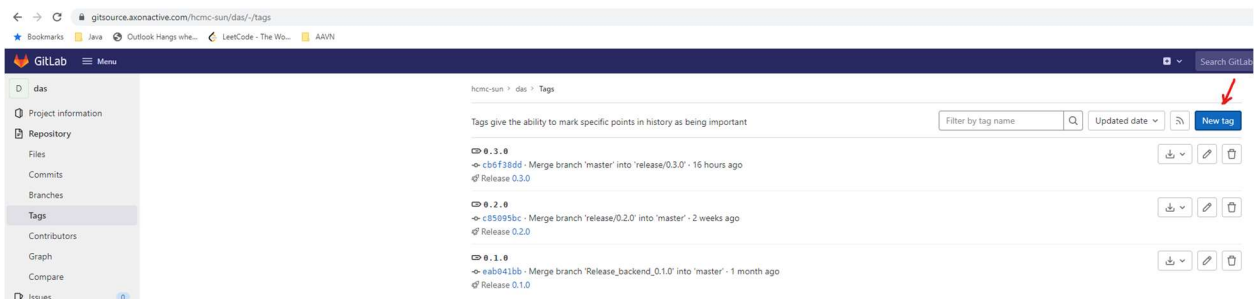

3. Create new **Tag** and **Release note** in Gitlab

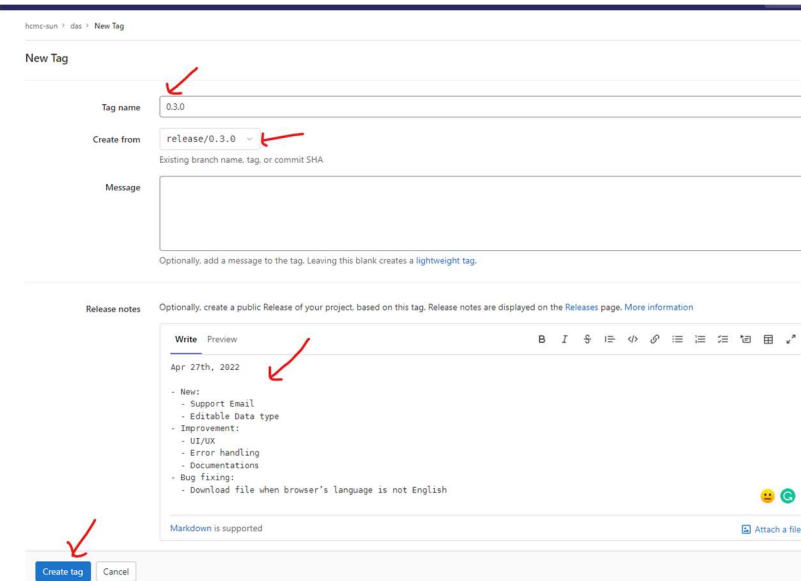

- Go to main folder of project (hcmc-sun/das) and click **Tags**

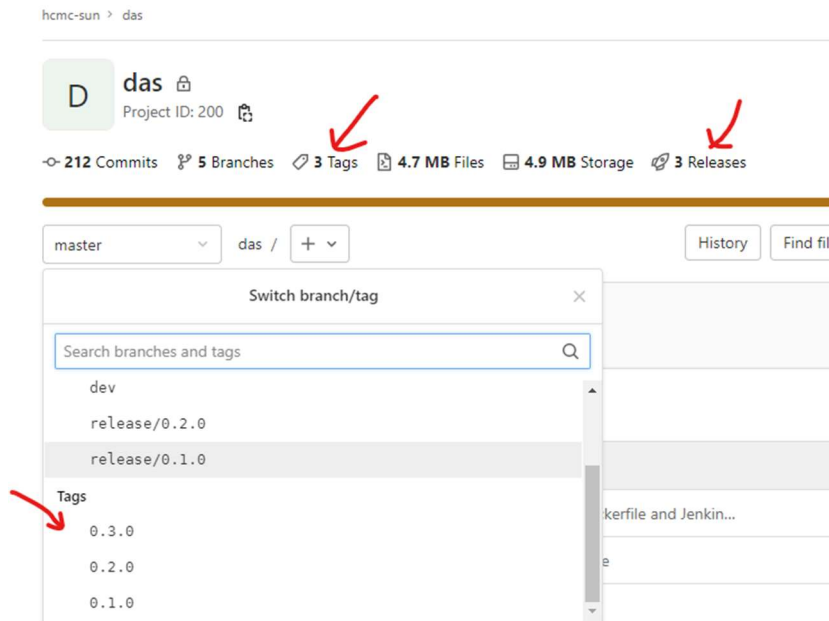

- Chose “New tag”

- Add **Tag name (version)**, chose **release/[version]** and add **Release note**

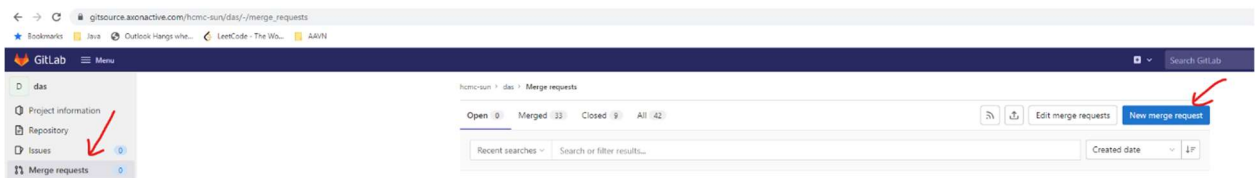

- Go back the main folder of project (hcmc-sun/das) to check new Tag and Release note

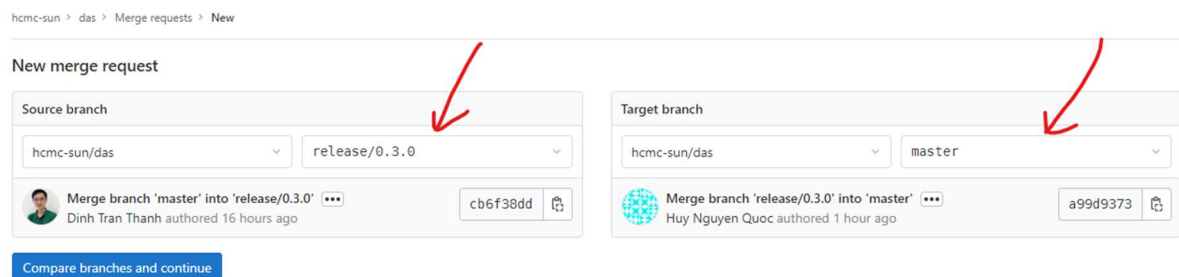

4. Merge release/[version] branch into Master Branch

- Click “Merge request” and click “New merge request”

- Choosing merge from **release/[version]** to **Master**

- The merge request will be approved by who authorized for Master branch. There are could be conflict when merge to Master, you need to solve the conflict before the request can be approved
